

Labor - Execution Rate

The Execution Rate (%EX) is a financial indicator that tells you how much (%) budget you've spent to date related to the amount you think you need to execute the project, i.e. [Expected Execution Budget](#).

$$\%EX = \frac{\textit{spent}}{EB_E} = \frac{\textit{spent}}{\textit{spent} + \textit{remaining}}$$

It is not (exactly) an indicator of progress of execution of project activities, i.e. it does not tell us if the project is close to completion. Ex: the last activity of the project is a one week training. This activity represents 30% of the budget but only one week of work.
